Supply Condition Code T

**Serviceable (Training Use
Only)**

PDC 399
SPRC 21-22 June 2011

Presented by: Mark Knowles

UNCLASSIFIED

Ready. Resourceful. Responsive!

Supply Condition Code T

Training Use Only

◇ Background

- **Intent :** *Establish a new Supply Condition Code (SCC) T 'Serviceable (Training Use Only)*
- **Scenario for use:** *Identify assets originally intended for combat use which no longer meet established criteria for combat applications but which can be safely used for training applications*
- **Current Process:** *Items reclassified from combat applications to training use only are currently assigned SCC "B" (Serviceable Issuable with Qualifications) and grouped with all other qualifiers identified by SCC "B."*

✧ Proposed Change

- ***Establish a new SCC of "T" and incorporate within MILSTRAP DoD 4000.25-2-M***
 - ❑ **Code: T**
 - ❑ **Title: Serviceable (Training Use Only)**
 - ❑ **Explanation: *New, used, repaired, or reconditioned material originally intended for combat use but due to condition, function, or performance characteristics is serviceable and issuable for training use only***

Supply Condition Code T

Training Use Only

◇ **Advantages/Disadvantages**

- ***Provide a more efficient and cost effective manner to manage assets originally intended for a combat application but now are restricted to training applications***
- **Advantages :**
 - **Clear re-identification of assets restricted to training use**
 - **Simplifies use of automated systems for sorting/sourcing***
 - **Eliminate training restricted assets from combat calculations**
 - **Enhanced resource management for budgeting, procurement, maintenance, positioning and assessment***
 - **Reductions in procurement, transportation & maintenance cost, less waste, improved asset posture***

◊ Advantages/Disadvantages (Cont)

- Advantages (Cont) :

- Enhanced safety - training restricted assets not inadvertently issued to fill a combat requirement.
- Implementation more cost effective than other solutions
- Solution more effective than other options

- Disadvantages :

- Inventory management systems require programming to incorporate new condition code.
- Documents require updates to include new condition code
- Services may desire re-identification of assets currently assigned SCC "B."

Supply Condition Code T

Training Use Only

Non-Concur

- **USAF: Cost to upgrade legacy systems, Re-identification workload, Current systems and processes adequate, Questionable ROI**
- **USMC Ground: Time to implement, Questionable ROI, All systems will have to be configured to support new SCC.**

Supply Condition Code T

Training Use Only

◇ **Response to Non-Concur**

- ***Precedent established for single service SCC applicability SCC Q USAF use only***
- ***Systems implementation of the code if established is still at the discretion of the service***
- ***If established, application of the code would be at the discretion of the service, NAR/CMSR initiated***
- ***Re- Identification, Navy intent, phase in application through attrition, wholesale change when advantages***
- ***Establishment of the code will prevent future conflicts with use of SCC T for other applications***
